Memo to File:

RE: American Consolidated Mining  
DOE/045/026  
Tooele County, Utah

Susan Linner, David Darby, and Pamela Grubaugh-Littig visited American Consolidated Mining on July 6, 1983 to observe the present disturbance. The representatives from American Consolidated Mining were: William Moeller and Farrell Yates. This mine site is located south of Wendover about 60 miles in the Clifton Mining District.

We observed the approximately two acre mill site. This mill site, being used as a test facility, is 40 years old. There are three levels to this area consisting of :

1. the tailing pond area,
2. the building with the milling equipment, and
3. the equipment storage area

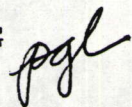

The tailing pond area consists of three ponds, one that has been recently disturbed.

The milling equipment is located inside an old building (including three Wilfley tables, twelve modern float cells, and a small crusher). The water for this mill is from Cane Springs, an underground lake, and is piped about one-half mile by gravity feed.

The equipment storage (generator, large crusher, storage tanks) is above all of the other areas. All of the equipment is on skids and completely mobile. The mobile equipment is parked by the mill.

We then proceeded to the two different mine sites, the Lucy "L" and the Yellowhammer. The operator anticipates some development work at the Yellowhammer mine site soon. This site was previously developed as a pit. American Consolidated plans an underground opening (8' X 10') with a 12% decline. The proposed disturbance would be on a previously disturbed area and consist of about a half acre for the pad.

PAMELA GRUBAUGH-LITTIG  
RECLAMATION ENGINEER
